I will be making a design for a martial arts studio management solution. I have been researching other martial arts softwares and they are all web applications. Thus far I have not seen a mobile version of what I am trying to accomplish. The purpose of this app will be to manage student records for a jiu jitsu gym. This app will be valuable for martial arts instructors and staff who are on the go, and most of them do not have the office space to work from their computers. A lot of the gym owners work off of their mobile devices, and much of that comes from the utilization of their studios - much of it is used for mat-space as compared to overhead.
